

August 26, 2014

To: Current and Potential Customers

CHASAN Industrial Complex would like to thank everyone who called or E-mailed us with congratulations after we published our first news letter five weeks ago. We were amazed at the reception we received from it.

News and notes

The 16' x 16' ground level door for unloading and loading of tractor/trailer rigs inside of building has already generated additional business for us and hopefully will create additional business in the future.

We have also completed a major project by changing the lighting in approximately 950,000 square feet of the facility to energy efficient lights which are monitored to automatically turn on lights in areas of the facility as required. This has allowed CHASAN to pass along saving to our existing customers and provide future energy savings customers through lower lease rates. In 850,000 square feet of the facility, we used food grade lighting allowing us to continue to be approved for food grade storage.

We also recently completed the installation of a new 70 ton energy efficient chiller to be used in the manufacturing processes of certain current and, hopefully, new customers.

CHASAN currently offers many services including local trucking services, Norfolk Southern rail services, logistics, warehouse space leasing, and truck load/unload services, and food grade storage.

Please see attached pictures of tractor/trailer rigs entering the facility; energy efficient lighting within the facility; and, the new chiller

Our facility is a food grade facility with pest control, fire protection, and 24 hour monitoring by Fleenor Security.

Call and schedule a visit to our facility (Former Magnavox building) in Greeneville, TN. We will be happy to provide a quote for our services and warehouse / manufacturing space.

Please see attached pictures and web site for details.
